COMPANY

WHO WE ARE

QAwerk is a professional quality assurance team providing full cycle software testing services for clients worldwide.
Our job is to ensure your product faces the market totally healthy and bug-free.

2015	300+	30	2
COMPANY FOUNDED	PROJECTS TESTED	QA ENGINEERS	TESTING CENTERS IN UKRAINE

Since 2015 we provide top quality software testing services for clients worldwide including the US, Europe, Canada, and Australia. Our extensive experience in quality assurance makes us true professionals in performing manual and automated testing, be it regression, integration, performance, functional, API, cloud, or security testing. We use only the latest and the most efficient testing tools and techniques, such as Selenium Webdriver, Appium, Fiddler, and several others, to provide our customers with the most thorough software testing.

OUR VALUES

Whether we work on a client's project or a tiny internal task, we uphold the same values that have been defined and cultivated in our company since its foundation back in 2015.

RESPONSIVENESS

We immediately address questions and requests, both from customers and co-workers, for better communication inside and outside the team.
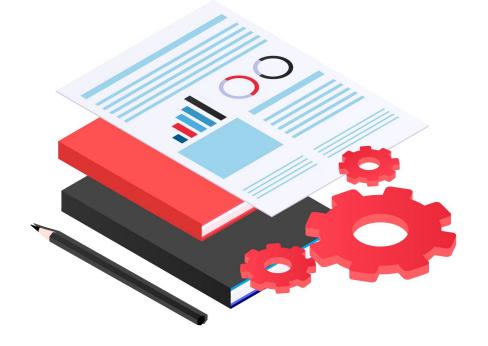

PROACTIVITY

No waiting until we're tasked with something by someone. If there is a slightest sign of us running out of tasks soon, or there is a lack of input - we let each other know. No idling, no waiting!
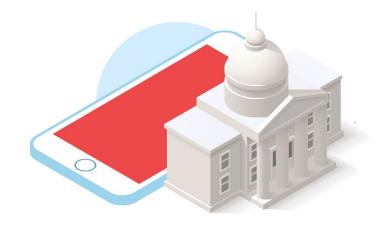

PROMPTNESS

Deadlines are important for both our business and for the businesses of our customers.
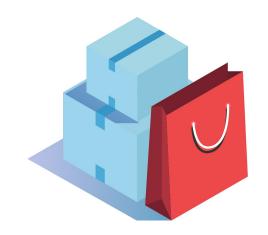

WRITTEN KNOWLEDGE

We maintain descriptions and logs of all documentation regarding processes and projects in written form to avoid getting stuck when one of our team members is absent.

AREAS OF EXPERTISE

E-GOVERNMENT	RETAIL & E-COMMERCE	BUSINESS AUTOMATION	STARTUPS & INNOVATION	MEDIA & ENTERTAINMENT	DATA MINING

CORE SERVICES WE PROVIDE

MANUAL TESTING

We perform top quality manual software testing for SaaS products and their components, be it a mobile app, a web platform, just backend or frontend, or API. We help brands like Unfold pass all their product's features, especially new ones, through several rounds of manual testing to prevent bugs and vulnerabilities early on. We design test plans and test cases only after we've clearly understood your software goals, making sure we cover all the critical areas in the most efficient manner. We guarantee comprehensive software testing delivered on time and on point.

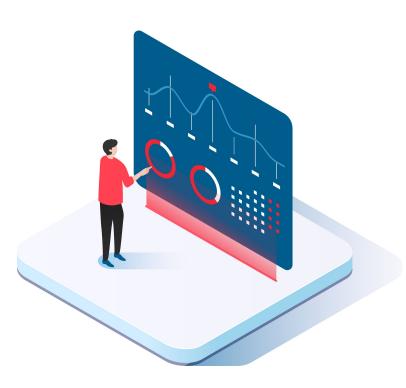

TEST AUTOMATION

Over the years of working with startups and well-established brands, our QA team has gained substantial experience in test automation, helping companies like Evolv build and run automated regression tests from scratch. Moreover, we will consult you on the need to implement test automation, whether it's reasonable and feasible for your project, and what components of your software do require QA automation. As your trusted QA partner, we can help you speed up your feedback cycle, increase test coverage, build a reusable test suite, and take your product to market faster.

CONFIGURATION TESTING
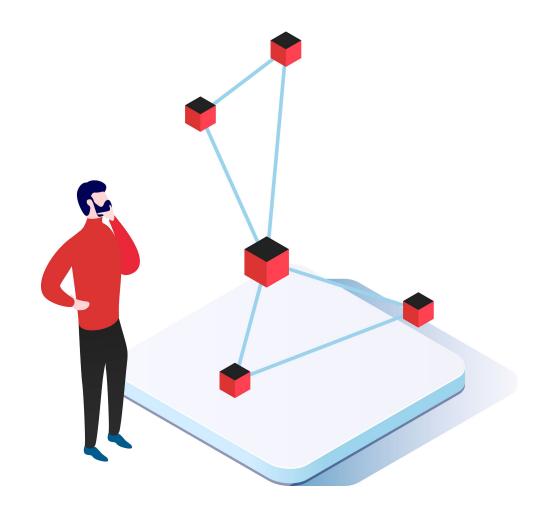

HOW WE WORK

MANAGED TEAMS

Based on the requirements and project scope, we provide you with an independently managed delivery team that will easily integrate into your internal team. Every team member is handpicked to match their skill sets with your project needs. Moreover, every team is supervised by a project manager who takes care of all the client communication and monitors the team's progress. Besides, we let you choose a communication channel, including an issue-tracking system, to make our cooperation convenient, transparent, and efficient.

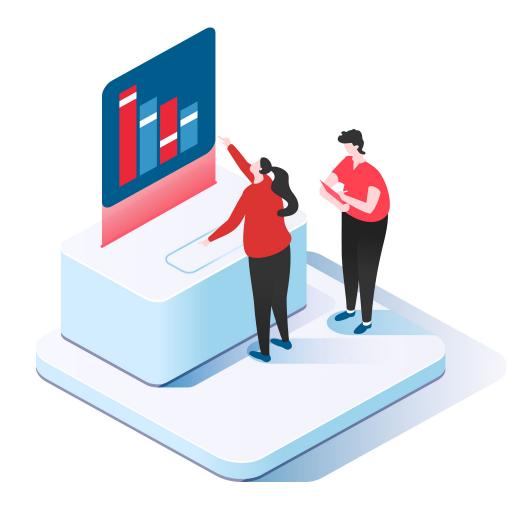

TIME & MATERIAL

With the T&M contract, you can be 100% sure there are no hidden costs involved and both of us stay on the same page. Following this pricing model, we offer our clients total control both over the deliverables and the budget. This approach also makes it easier to scale teams up and temporarily complement them with an expert in a specific domain to complete the task successfully. At the end of each month, we send out invoices based on hourly figures from the issue-tracking system.
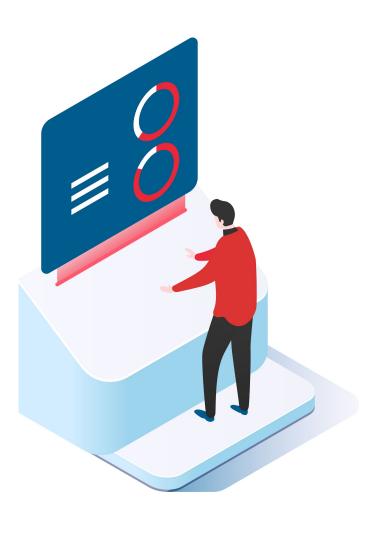

HOW WE TEST SOFTWARE

1. DISCOVER

We carefully analyze your product to make sure we understand the business logic behind it as well as the steps we need to take to meet your software goals.
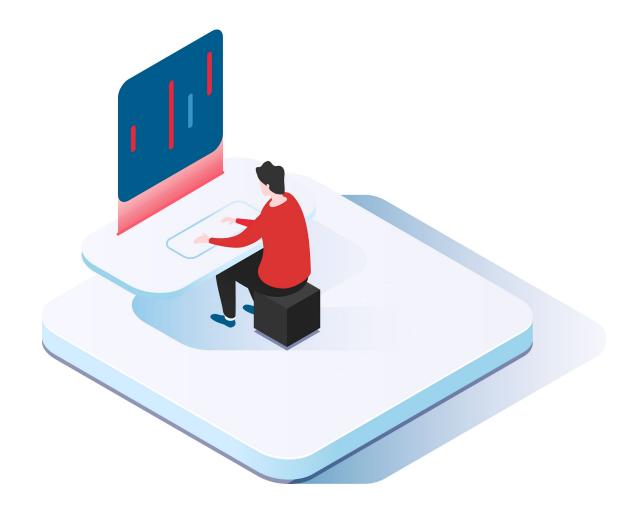

2. DEFINE

Once we've discovered your product's key functions and your business goals, we estimate the project scope, clearly defining and documenting each step while specifying the tests, tools, deadlines, and cost involved.

3. TEST

We perform manual and automated testing, from unit testing to system and acceptance testing, to ensure your software is stable, secure, and running smoothly.

4. REPORT

Once the testing cycle is completed, we provide you with a bug report that contains steps to reproduce the bug, the actual result (how it works now), and the expected result (how it should work).

If you don't have developers on board to fix bugs found by QAwerk, we can offer you our development services provided by Redwerk company.

WE WORK WITH

We've worked with QAwerk to handle the QA of our native desktop app. They've done a tremendous job and even went out of their way to ensure the quality of the app. We'll continue working with them in the future.

Julien Berthomier, CEO *at Station*

QAwerk's efforts enabled internal developers to eliminate bugs and improve the app's stability. Communicative and accommodating, the team proved capable of identifying technical errors.

Alfonso Cobo, CEO *at Unfold*
